

# *Science Enrichment*

In 2005 a \$105,000 traditional grant was awarded to support the "Science Teacher Enrichment Program" by providing funds to cover at least four different workshops each year. Workshops would serve 80-100 teachers annually. This grant expects to expose hundreds of teachers to projects and research related to their curricula, in turn reaching tens of thousands of students across NC, with the goal of improving test scores while also fostering long-term interest and ability in the subjects that form the basis of careers in science and health.
