

Micro Investigations Center in the Nature Research Center

This grant supported one specific part of the Nature Research Center, the Micro Investigations Center. The Micro Investigations Center's focus is on Genomics, nanotechnology, DNA, cellular and other micro research projects in a laboratory setting. The working lab concept will allow the public to experience the role of scientific research and application in everyday life through this unique delivery setting. This project was approved as a special request supporting the development of the exhibit design, educational programs and equipment for the investigate lab and research laboratory. The \$1.5 million was approved as a 5 year grant and the Micro Investigations Center opened in 2012.
