

North Carolina School of Science and Mathematics

This 2009 Ribbon of Hope grant funded the Labs for Learning, a year-round educational program aimed at inspiring interest and success in the STEM fields among high-potential rising 7th through 10th graders in the northeastern North Carolina school districts of Warren, Halifax, Northampton, Bertie and Hertford counties and the Weldon City schools. These districts form the Roanoke River Valley Educational Consortium. The Labs for Learning program is staffed by NCSSM teachers, and consists of summer workshops on the school's campus, field trips to university research and corporate labs, on- and off-campus career seminars and support activities at home and online during the school year.
