

North Carolina School of Science and Mathematics Foundation

NCSSM requested \$31,152 in funding to annually support rising 9th graders over four years. The students participated in a summer camp, research projects and additional activities at their home school. Math concepts, hands-on activities and inquiry-based exploration, scientific writing and presenting were all components in this program. The program is designed to encourage students to pursue careers in research or other science-related areas. Annually new students will join the program designed to provide engagement into STEM careers. The grant served 155 students over four years from 2013 – 2016.
